

DR. SALVATORE PERNA, AZ, USA

“I would highly recommend this fantastic device for all dentists”

Dr. Salvatore Perna focuses on digital cosmetic dental reconstruction with innovative design and restorative care.

“My philosophy is to restore patients to their optimum oral health with care and a conservative, gentle touch. One of the most rewarding aspects of dentistry is seeing patients leave the office with a transformed smile that enhances their self-esteem and confidence.”

A patient was seen in our clinic for restoration of decayed and misaligned teeth #5-13. The patient requested ideal anatomical cosmetics, and was cleared for dental care by the MD and all diagnostic records and proposed treatment care were discussed and agreed upon.

I prepared the patient for full coverage crowns and scanned the maxillary and mandibular arches with the Heron™ IOS. The scanner's compact design and tapered-rotating tip ensured optimal patient comfort in tight occlusal spacing, easily scanning the distal areas of the posterior teeth.

I was curious to evaluate the cross-arch accuracy and marginal integrity of the Heron™ IOS software. Transferring STL files to my crown and bridge and denture laboratory was easy and occurred with the utmost efficacy. Fitting the models for verification proved that the completed crowns seated perfectly on the patient's teeth with exact and unmatched marginal integrity.

The patient restorations were seated with ease and precision. Happy patient, successful dentist! “I wanted to purchase and use the best IOS available from a company that would also offer me the best technology, support and future development.”

I believe 3DISC has now risen to a level that supersedes all competition to date. I would highly recommend this fantastic device for all dentists; from the new practitioner to the most experienced, in order to bring your patient care to the next level of excellence”.
